

To run our product you need to have Eiffel Studio installed on your computer (available on <https://www.eiffel.com/forms/download-eiffelstudio/>). After opening Eiffel Studio, choose `rms.ecf` file and make sure that the target of the program is `rms_standalone`.

On the right from the code you can see a list of libraries of the project. The `sqlite` library must be there.

If you cannot find the `sqlite` library, add it to the project. Click on Add a library icon on the panel above the folders with code and libraries.

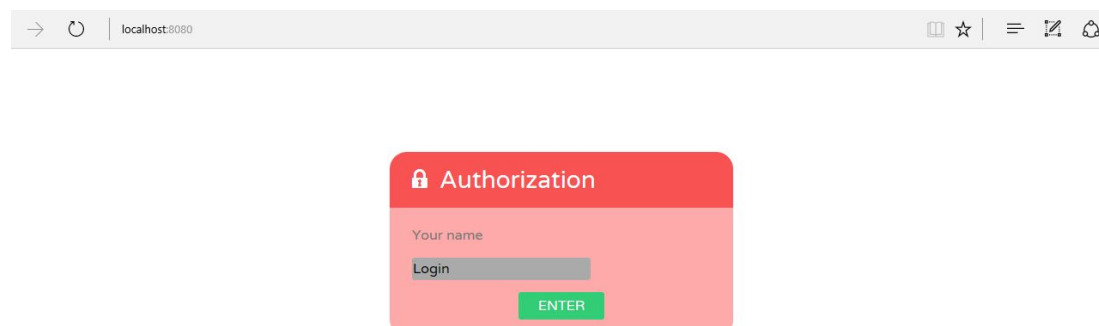

Find and choose `sqlite` and click on the include button.

After including necessary libraries, compile and run the project using special buttons.

On this step you can test functionality in any browser; but Microsoft Edge and Internet Explorer are preferable. Type <http://localhost:8080> in the address bar and open authorization page.

After login you can input a report period on the next page.

localhost:8080/report.html?section=authorisation&name=Login

Unlocked

Pick report period

10.05.2016

06.04.2017

ENTER

And finally, the page with the choice of the menu item depending on your needs appears.

localhost:8080/index.html?section=report&report_start=2016-05-10&report_end=2017-04-06
